

PURYIELD
A PURSELL INNOVATION

HANDLING TIPS

How to handle, store, blend and apply PurYield to protect your nitrogen investment and achieve optimal crop performance.

Handle gently

Using well-maintained, smooth equipment at slower speeds to protect coating and prevent abrasion.

Store securely

Bracing/reinforcing bin walls to manage pressure and using bulkheads to prevent spilling.

Blend carefully

Adding PurYield last. Keep blenders full, minimize mixing time and use inclined blenders where possible to reduce coating contact.

Apply with well-maintained equipment

that's properly calibrated to ensure even placement. Reduce speeds in airflow blenders and double spread with spinner blenders.
